# BANKING PROCESS CLASSIFICATION FRAMEWORK<sup>SM</sup> (PCF)

#### **BANKING PCF OVERVIEW**

Based on the renowned Process Classification Framework<sup>SM</sup> (PCF), a taxonomy of cross-functional business processes intended to allow objective comparison of performance within and among organizations, and the support of IBM, this industry PCF enables more industry applicable content by outlining and defining processes and activities specific to this industry. This allows organizations to choose the framework most relevant to the specific process improvement need, whether it be benchmarking within or across industries, business process management/re-engineering, or content management. The cross-industry PCF and industry PCFs are available on the APQC website at no charge. IBM provided the subject matter expertise

and intellectual property to create the industry specific business process classification frameworks, as part of the IBM's continuing leadership in the promotion of the Cross Industry Process Classification Framework at an industry level.

#### THE FRAMEWORK FOR PROCESS IMPROVEMENT

Experience shows that the potential of benchmarking to drive dramatic improvement lies squarely in making out-of-the-box comparisons and searching for insights not typically found within intra-industry paradigms. To enable this beneficial benchmarking, the APQC Process Classification Framework<sup>SM</sup> (PCF) serves as a high-level, industry-neutral enterprise process model that allows organizations to see their business processes from a cross-industry viewpoint. The cross-industry framework has experienced more than 15 years of creative use by thousands of organizations worldwide. The PCF provides the foundation for the Open Standards Benchmarking Collaborative<sup>SM</sup> (OSBC) database

and the work of its advisory council of global industry leaders. Each version of the PCF will continue to be enhanced as the OSBC database further develops definitions, processes, and measures. The PCF and associated measures and benchmarking surveys are available for download and completion at no charge from the Open Standards Benchmarking Collaborative Web site at <a href="https://www.apqc.org/osbc">www.apqc.org/osbc</a>.

#### **HISTORY**

The cross-industry Process
Classification Framework was
originally envisioned as a taxonomy
of business processes and a common
language through which APQC member
organizations could benchmark their
processes. The initial design involved
APQC and more than 80 organizations

with strong interest in advancing the use of benchmarking in the United States and worldwide. Since its inception in 1992, the PCF has seen updates to most of its content. These updates keep the framework current with the ways that organizations do business around the world. In 2008, APQC and IBM worked together to enhance the cross-industry PCF and to develop a number of industry-specific process classification frameworks.

#### **LOOKING FORWARD**

The cross industry and industry Process Classification Frameworks are evolving models, which APQC will continue to enhance and improve regularly. Thus, APQC encourages comments, suggestions, and more importantly, the sharing of insights from having applied the PCF within your organization. Share your suggestions and experiences with the PCF by e-mailing pcf\_feedback@apqc.org.

#### **ABOUT APQC**

An internationally recognized resource for process and performance improvement, APQC helps organizations adapt to rapidly changing environments, build new and better ways to work, and succeed in a competitive marketplace. With a focus on productivity, knowledge management, benchmarking, and quality improvement initiatives, APQC works with its member organizations to identify best practices; discover effective methods of improvement; broadly disseminate findings; and connect individuals with one another and the knowledge, training, and tools they need to succeed. Founded in 1977, APQC is a member-based nonprofit serving organizations around the world in all sectors of business, education, and government. APQC is also a proud winner of the 2003 and 2004 North American Most Admired Knowledge Enterprises (MAKE) awards. This award is based on a study by Teleos, a European based research firm, and the KNOW network.

#### **ABOUT IBM**

IBM works with its clients to develop new business designs and technical architectures that allow their businesses the flexibility required to compete in a global business landscape. The business is also adjusting its footprint toward emerging geographies, tapping into IBM's double-digit growth, providing the technology infrastructure they need, and taking advantage of the talent pools provided to better service IBM's clients. IBM's major operations comprise a Global Technology Services segment, a Global Business Services segment, a Systems and Technology segment, a Software segment, and a Global Financing segment. #### CONTENT ORGANIZATION

**Root** – Process Classification Framework: The Process Classification Framework (PCF) is an Open Standard and is administered by APQC.

**Level 1** — Process Category: Represents the highest level of process in the enterprise, such as Manage Customer Service, Supply Chain, Financial Organization or Human Resources.

**Level 2** – Process Group: Indicates the next level of processes and represents a "group of processes." Perform After Sales Repairs, Procurement, Accounts Payable, Recruit/Source, or Develop Sales Strategy are each examples of a process group.

**Level 3** – Process: A series of interrelated activities which convert inputs into results (outputs); processes consume resources and require standards for repeatable performance; and processes respond to control systems which direct the quality, rate and cost of performance.

Level 4 — Activity: Indicates key events performed when executing a process. Examples of activities include Receive Customer Requests,
 Resolve Customer Complaints, Negotiate Purchasing Contracts, etc.

The PCF is written in United States English language format.
